

## ABSTRACT

A carton and blank for forming a carton for holding a plurality of articles. The carton includes a series of hinged wall panels forming a sleeve including a top panel and  
5 opposed side panels hingedly connected to the top panel. The carton further comprises a continuous strap handle formed from the carton and extending entirely across the top panel and one of the side panels. The strap is so connected at its opposite ends as to provide a surplus of material to enable a user part of the handle to be brought into a position of use.
